Company Overview

www.optima.it

Optima offers the most complete range of software products for glass manufactures divided into Desktop solutions, for a use by a single-user, and Enterprise Family, a Client / Server solutions based over SQL database.

The range of Products offered move from optimization systems for glass cutting, CAD/CAM system for three-axis working centers, nesting optimization systems up to ERP systems with integrated management of advanced production planning and production tracking via Barcode or RFID tags.

The most comprehensive and performing catalog of integrated solutions

Erp Systems

Opty-Way Enterprise - Client/Server system in native Windows environment for the integrated management of glassworks activities.

Capacity Planning - Software system for the Automatic Planning and Scheduling of the glass production.

Stock & Purchase - Management of Suppliers, Purchase Orders and Stock Control.

Production Cost & Income - A tool to estimate cost and income of each production item.

Monitoring

GMC-Way - Real-time management and control of production status and execution times.

Line Manager - Cutting line supervisor integrated with Re-OPT and TV-Way.

Tv-Way - Break-out display software.

Defect-OPT - Online optimization tool for excluding defect area.

Optimization Tools

Opty-Way - High-efficiency "free" waste optimizer.

Rack-Way - Sequence-maintaining waste optimizer module.

Nest-Way - Module for the automatic nesting of regular and/or shaped figures.

Re-OPT - Dynamic Re-optimization of cutting work orders and broken units.

Drawing Systems

Geo-Way - Software system for the parameter-based creation of cutting profiles. Parametric shape library.

Doors-Way - Software system for the parametric construction of simple and/or composite glass door structures.

Cad-Way - Two-dimensional CAD to generate free shapes.

Cam-Way - CAD/CAM software system to generate drawings and 2D/3D machining profiles in a parameter-based format.

Scan-Way - Software system for image profile vectorization via scanner or digital camera. 2D and 3D processing.

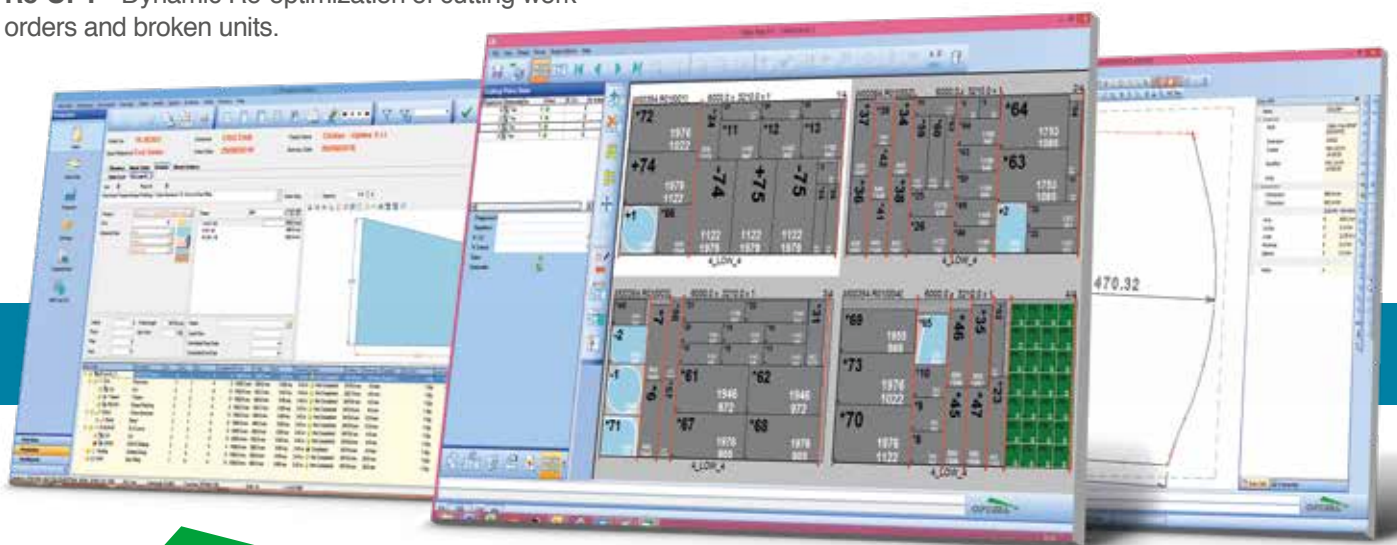

Single User Solutions

NC-Way - Front-end software system for automated float glass cutting tables.

Edit-Way - Single-user optimizer system designed to be used on board the cutting table.

Optistrato - Interactive management of optimization and break-out of laminate glass machines.

Opty-Way - Single-user office optimizer system.

The house
of **best**
competence
in glass.

Optima S.r.l. has been working in the field of Information Technology applied to the flat glass processing sector and, in general, to all flat surface tool processing areas since 1994.

Thanks to the use of high-level software development and implementation technologies, plus direct contact with technology developers, as well as the use of consultants and technicians who can skillfully interpret company processes, Optima has strengthened its international vocation over the years by opening various foreign offices in order to provide the best solutions for the market's diverse needs.

Born from experience and professionalism of his founding members as a result of an efficient synthesis of dynamic, competence and motivation, now, a young and prepared staff of professional people always at your disposal, it's ready to fast actions and in the most efficient way to satisfy customer needs.

We are dynamic by vocation and everything we do is inspired by the willing of reaching our goal without disregard the care and the good quality of the service provided.

Company

More than
20 years
experience

Our Team

Hi-level
international
skilled team

A good relationship with your “Customers” simply means a good support service.

Our assistance service it's provided in several ways according to different specific needs:

- Hot Line
- Technical Support Web Site
- E-mail
- Remote Assistance

Services

More than
10.000
customers worldwide
